TimeSync demo commands

Use the final branch. Run commands from the repository root.

Linux VM: Ubuntu 24.04 / Linux Mint 22, Python 3.12, Git and sudo.

01 Get the repository

```
cd ~
git clone --branch final \
  https://github.com/Annadata-Aniketh/Network-Time-Sync.git
cd Network-Time-Sync
```

02 Prepare and check

```
./timesync setup
./timesync doctor
./timesync test
```

03 Present from the menu

```
./timesync
```

i Walkthrough 4 Compare 5 Plots 6 Summary 9 Recovery

Keep 60 seconds per mode; show plots before running recovery. 0 exits.

For plots and summary, press Enter to use the latest comparison.

04 Optional commands

```
./timesync explain
./timesync --batch --scenario both --duration 60
./timesync --batch --scenario recovery --duration 60
./timesync web
```

Browser lab: http://localhost:8080 (Ctrl+C stops the server).

Batch runs save data in evaluation/runs/<run>/. Generate comparison plots:

```
.venv/bin/python -m evaluation.plot_results \
  --data-dir evaluation/runs/<run>
```

Replace <run> with a completed comparison directory. Recovery has its own summary.

Run one network experiment at a time. Virtual clocks only; OS time stays unchanged.
